ddsparis@ddslogistics.com

DDS Freight is the ideal solution for forwarding agents and 3PL, covering the ensemble of their needs for managing the logistics chain.

DDS Freight permits forwarding agents to globally manage import/export dossiers, billing and sales, tracking, and documentation. It also allows 3PL providers to plan and execute the supply chain on behalf of a third party. The solution works as a data retrieval and consolidation tool that assures monitoring and total traceability throughout the entire chain thanks to the complementary module Forum Traffic.

The advantages:

- Complete management of international trade and of multimodal transportation (air, sea, land)
- Interactivity between transporters and shippers
- Tracking of the entire flow as well as item based order management
- Management of transportation documents and financial aspects
- Wide-ranging statistical analysis
- Low installation cost and short deployment time assure rapid ROI.

- Allocation of orders to containers and the automatic creation of transit files
- Interface with DDS Shipper

Forum Traffic

- Tracking portal
- Retrieve and consolidate data from different systems
- Shipping follow-up
- Alert engine
- Statistics

EAI (Enterprise Application Integration) :

- Communication between various IT platforms
- Secure data exchange and conversion. XML, FTP, XCS...
- Management of voluminous data streams (+ than 600 000 messages/day)

1

TMS Transit Management

This module gathers the data from import/export dossiers and manages all forms of transportation (air, sea, land), registers shipments and consolidations, produces quotes, bills clients, evaluates purchases from different providers, edits necessary documents and generates statistics. DDS Freight has a standard interface with the customs clearance program Deltapass from Conex as well as booking and tracking programs from Traxon and INTTRA.

2

Billing Control

DDS Freight includes an accounting program that calculates purchasing prices by applying pre-determined rates. This module allows for controls on purchases from multiple providers and puts out a payment order that is automatically delivered to the accounting department.

3

Tracking and Alerts

This module assures the tracking of import/export operations by notifying the system every time there is an interruption in the chain (lifting, break loads, shipment, arrival, delivery). The alerts are in the form of automatic messages sent directly to the appropriate person or department.

4

Sales Management

This module enables the organization and monitoring of sales forces: prospecting, lead transformation and follow up.

5

Order Management

Thanks to this function, users can easily manage orders, or shipping on behalf of the shipper, by referring to a detailed order form for each client. It is capable of displaying a list of available products furnished by the supplier as well as the consolidations transmitted by the shipper. DDS Freight allows users to assign and distribute orders to containers and to automatically generate the transit file.

6

Forum Traffic

A module that enables data retrieval and consolidation in order to assure monitoring and total traceability throughout the entire logistics chain.

7

EAI

The EAI module enables easy exchanges of data between different IT platforms.
