**Leader in international trade and
transport software solutions**

Leader in international trade and transport software solutions

DDS Logistics is one of Europe's leading developers of TMS software solutions. We put over 20 years experience of proven industry experience to work for our customers to provide them with the only modular solution that is exclusively dedicated to their unique needs and that manages the entire process from beginning to end... international trade, sourcing, import/export, multimodal transportation and fulfillment.

Our knowledge of the transport industry allows us to provide each client, be it a shipper, a forwarding agent or a 3PL, with a solution perfectly adapted to their needs.

DDS Logistics solutions guaranty a rapidly visible return on investment (ROI) by lowering the cost of transportation and storage through efficient management the supply chain, by raising productivity through automated tasks, and by improving the respect of delivery dates which leads to a better overall quality of service.

More than 50 clients, such as Carrefour, Leroy Merlin, Nexans, Total, Arcelor Mittal, Gefco, Heppner... have put their trust in DDS Logistics' solutions DDS Shipper and DDS Freight to optimize and manage their international sourcing, transportation or transit needs.

Some of our references...

Specialized in Transport Management System, DDS Logistics offers solutions adapted to each user's needs. Whether you are a retailer, industrial, shipper, a forwarding agent, or 3PL, we have the software solution that answers your needs: DDS Shipper and DDS Freight

Our solutions

DDS Shipper responds to the ensemble of customers' needs for provisioning and transport through its software suite that includes the following modules: Sourcing, TMS and Finance. This solution ensures complete management of international trade and multimodal transport operations, from referencing through to fulfilment, by optimizing workflow traceability, providing a global view of the supply chain and managing financial aspects related to these operations. Even more, it enables users to generate optimized logistics plans that provide the total cost of goods sold (COGS).

In today's global marketplace, international sourcing has become a prime issue for major retailers and industrials and the ability to identify the best sources for goods is paramount to maintaining competitiveness. Selecting a product is no longer uniquely dependant on the rapport quality/price but equally on the ability to effectively manage the logistics component, and the cost associated with it. For this reason, logistics planning must be incorporated at the earliest phases of sourcing, product selection, in order to obtain a veritable COGS that takes into account customs fees and logistics costs. This Sourcing feature of DDS Shipper allows companies to compare offers objectively taking all of these factors into account.

The TMS Import/Export module manages the execution of the ensemble of provisioning, import and export operations - from the moment merchandise becomes available through to delivery at the warehouse.

TMS Distribution allows users to oversee the totality of the logistics stream - from the routing of an order from the point of preparation (warehouse, platform, etc...) through to its final destination. By converting orders into transport needs, TMS Distribution proposes different logistics blueprints, allowing the user to selection the best adapted, most economic route.

DDS Freight, designed for forwarding agents and 3PL providers, offers a complete set of features that enable them to manage the ensemble of their activities (air, sea, land). A truly hands-on tool, it ensures the correct management of import and export dossiers by covering not only the transportation and customs aspects but equally those associated with buying and selling - all in one package.

This solution provides users with everything they need to organize logistics operations by ensuring the interaction between each actor in the chain, tracking the workflow, administrating transport documents and managing financial streams. In short, it enables users to control costs and margins over the entire supply chain all the while providing extended statistical analysis.

For 3PL providers, DDS Freight enables them to retrieve and consolidate data from the different entities and contractors in order to provide them with the ability to track the entire logistics chain.
