

**JOIN2SHIP**  
by DDS Logistics

**Ship and receive  
in complete peace of mind**

Join2ship  
the collaborative platform  
to digitize your receptions  
and deliveries

Join2ship is the collaborative platform that digitizes exchanges between the players in the supply chain. With Join2ship, you can ship and receive your products in complete peace of mind.

## SHIPPERS

**«My customer deliveries are critical.»**

Deliveries have become an essential part of customer relations: Making deliveries to customers on the date and at the time they choose is essential.

A high-performance delivery chain achieves this by coordinating a multitude of internal and external players, while also offering visibility to customers.

**Join2ship,  
the collaborative  
platform to  
digitize your  
deliveries.**

With Join2ship, shippers, carriers and customers work together and share information and documents all along the logistics chain: order integration, real-time tracking, organization of delivery appointments, etc.

You can now offer your customers reliable deliveries on time, at the time and place they choose, with real-time visibility.

Join2ship is also the easy solution to share your shipments with other shippers, to make even more improvements.

Plus: reduced costs and a smaller environmental footprint.

### The Join2ship platform offers

- Satisfaction for your B2B customers, work sites, warehouses, etc.
- Shared real-time visibility of your shipments
- More productive transport operations
- Easy organization of the collections of your goods
- The benefits of shared shipments

## CARRIERS

**«Customer satisfaction is critical.»**

On an increasingly competitive market, your customers expect reliability, efficiency and visibility of their deliveries. But how can you meet all these demands without wearing out your drivers and expensive IT investments?

**Join2ship,  
the collaborative  
platform for  
communicating  
with customers  
and simplifying  
your drivers' jobs**

No more emails and phone calls. You receive your transport orders automatically. Your drivers no longer waste valuable time waiting, because you can reserve the loading and unloading slots in your customer's appointments schedules. You are immediately informed of any incidents or delays.

If you already use a TMS or an onboard information system, you can exchange your data by EDI, even with small shippers.

And if you do not already have an information system, we can provide your drivers with a free mobile application.

Join2ship is the collaborative platform that facilitates collaboration, builds customer loyalty and reduces driver stress.

### **The Join2ship platform offers**

- Increased productivity
- Reduced waiting time for drivers
- Better service for your customers
- Quicker billing of your services
- Digitization of your transport operations without any investment

## CUSTOMERS

**«The efficient reception of my supplier orders is critical.»**

Reliable supplier deliveries are crucially important for manufacturers and distributors.

But today, if you have no visibility of the delivery of your orders, you cannot plan and organize the reception of incoming goods in your warehouses and stores, or anticipate late or early deliveries.

**Join2ship,  
the collaborative  
platform  
to manage  
the reception  
of incoming  
goods**

With Join2ship, you choose the date and the time of your deliveries, you are informed of any late or early arrivals and you can organize your teams to receive the goods.

We can connect all the suppliers you invite, from small companies to major groups, using the collaborative portal or APIs with their systems.

By facilitating collaboration with your shippers and carriers, Join2ship helps build quality and long-lasting relations with your suppliers.

### The Join2ship platform offers

- Better service: you receive your deliveries by appointment at the time you choose, and you are informed of any late or early arrivals
- Easier organization of your reception schedules
- Visibility and security of your received deliveries
- Improved productivity of your teams
- Reduced risk of product outages or production shutdowns

# Advantages for everyone

- Visibility of deliveries
- Customer satisfaction
- Productivity and reduced costs
- Security

**All of that,  
without any risks and  
with no obligations!**
