# Digitize your supply chain

*The functional cover provided by our products will enable you to achieve your professional objectives and will provide the most effective solution for your requirements. Whatever the problem, we have the answer!*

## DDS SHIPPER

The TMS solution for shippers: Manufacturers, distributors and 4PL operators

DDS Shipper is a transport management solution for planning, chartering, tracking and overseeing your domestic and international shipment flows so as to optimize your transport needs and control your costs.

## DDS IMPORT

This is the solution for coordinating your import supply chain, designed for central purchasing organizations, importers and manufacturers

DDS Import is a solution for coordinating supplier orders and organizing transportation, offering full visibility for international flows and minimizing the risk of delays and extra costs.

## JOIN2SHIP

The collaborative transport platform for managing the relationship between customers, suppliers and carriers

Join2ship is a collaborative solution that gives customers real-time visibility on their deliveries and offers

simple tools for organizing transport and planning appointments with carriers.

## DDS FREIGHT

This is the international transport management solution for freight forwarders

DDS Freight is a TMS designed for freight forwarding operations, which covers not only the management of transit files, and the provision of quotes for sales and purchasing prices, but also the sharing of information with all partners and agents in the transportation field.

## DDS SOURCING

The solution for international purchasers

DDS Sourcing is a solution designed to optimize international purchasing and for the calculation of the costs arising from distant sourcing.

DDS Sourcing provides a detailed view of the cost price of an imported product so as to identify the best sources of supply.
