

DDS Logistics acquires collaborative supply chain management specialist Fluid-e

As part of its development strategy, DDS Logistics, France's leading TMS provider, has acquired Fluid-e, a major player in collaborative inventory and replenishment management.

In full development, with a rapidly growing supply chain sector, DDS Logistics, a leading software vendor specializing in transport, logistics and international sourcing, has announced the acquisition of Fluid-e and its innovative and collaborative solution dedicated to inbound supply chain management.

Founded in 2010, Fluid-e is a SaaS portal capable of executing the procurement processes of manufacturers, distributors and logistics providers in sectors as varied as food, consumer goods, luxury goods and healthcare. Its scope of action covers three main areas, which have become essential to ensure the performance of the supply chain

- An EDI and API platform for information exchange between players
- Inventory visibility and shared calculation of replenishment needs
- Sending and tracking of orders, including quality control and appointment scheduling

Providing all the keys to collaborative management of a supply chain ecosystem

With this new solution, DDS Logistics offers its customers a complete range of solutions, including international sourcing, vendor managed inventory, and transport management, enabling them to manage an entire collaborative ecosystem, from upstream to downstream.

This collaborative vision of stocks, orders and shipments brings significant benefits to manufacturers, retailers and logistics service providers: dynamic adjustment of stocks to the right level leads to significant reductions in costs and CO2 emissions and avoids any risk of disruption.

"Integrating Fluid-e into DDS is a great opportunity for the company. We share the same values and the same approach to expertise and support for our customers over the long term," says Jérôme Bour, President of DDS Logistics.

"We are delighted to transfer Fluid-e, its expertise and know-how to a solid and innovative company such as DDS. This not only ensures the sustainability of our solution and our commitment to our customers, but also provides significant development potential for our teams," says Maël Barraud, president and founder of Fluid-e.

About DDS LOGISTICS

Founded in 1984, DDS Logistics specialises in software for the organisation and management of transport and international sourcing. DDS Logistics is the market leader in France for TMS (Transport Management System) and offers a range of services for the digitalisation of transport covering all areas of the supply chain, both domestic and international. Our collaborative solutions provide visibility of flows and cost control throughout the transport chain.

DDS Logistics solutions are aimed at manufacturers, distributors, importers, exporters and logistics service providers and guarantee a rapid return on investment: lower transport costs, reduction of stocks through better control of the supply chain, control of lead times and service quality, etc.
